

integrator_modulo_twopi.xbe

Attributes

```
xbe name=integrator_modulo_twopi
input_vars: x
output_vars: y
rparms: k=1
stparms: y_st=0
igparms: y_ig=0
outparms: x y
```

Description

`integrator_modulo_twopi.xbe` gives $y = k \int x dt$, and ensures that $-2\pi < y < 2\pi$. The parameter `y_st` provides the start-up value for `y` in start-up simulation.
